

## Marketing description

CLIMAVER<sup>®</sup> is a glasswool based pre-insulated duct system for air-conditioning, ventilation and heating and cooling systems. CLIMAVER<sup>®</sup> offers superior acoustic comfort, thermal performance and high level of airtightness to keep your air fresh and making the system energy efficient.

CLIMAVER<sup>®</sup> Neto reduces noise levels generated by fans and air-conditioning units providing superior acoustic comfort to the building occupants.

CLIMAVER<sup>®</sup> is highly absorbent, including at low frequencies, where the problem of noise generated by the AHU or ventilation machine is greater

### Typical example: Acoustic attenuation in dB for 5m of 400x200mm duct

- Increases the level of acoustic comfort of your buildings
- No need for additional acoustic insulation liners inside the ducts
- No need for silencers or sound attenuators (depends on system design)

## Packaging
